IM : Creation, Altering and dropping of tables and inserting rows into a table [use constraints while creating tables]
 Examples using SELECT Command

yntax:-

```
CREATE TABLE tablename
(
  column_1 datatype(size),
  column_2 datatype(size),
);
```

- ① Create a Table 'ST' with 'Create Table' Command in Sgl which maintains information about the students.
 ⇒ Create table st (sid int primary key, sname varchar(20), sdept varchar(20), sgrade varchar(5));

- ② Describe the structure of a table using "DESC" Command in SQL
 ⇒ desc st;

output:-

Name	Null?	Type
SID	NOT NULL	NUMBER(38)
SNAME		VARCHAR ₂ (20)
SGRADE		VARCHAR(5)

②

Table altered

③

Table altered

④

Table altered

⑤

Table altered

Register No: 25135A0519

Experiment No: 1

Date:

② ALTER table 'St' with new name "Student".

⇒ alter table St
rename to Student.

③ ALTER table by adding new columns age and address

⇒ alter table Student
add (age number(2),
address varchar(20)
);

④ Modify The Student table by changing the columns datatype and size query

→ alter table Student
modify (Sdept int,
Sname varchar(10));

⑤ Rename The columns to name, dept, and grade in Student table

⇒ alter table Student
rename column Sname to name

⇒ alter table Student
rename column Sdept to dept

⇒ alter table Student
rename column Sgrade to grade

⑥ Table altered

⑦ Table altered

name	Null?	type
CID	NOT Null	Number(38)
CNAME		VARCHAR(10)

⑨ Table created

name	Null?	Type
SID	Not Null	Number(38)
CID	Not Null	Number(38)

⑥ Alter table "Student" by dropping column.

⇒ alter table Student drop column dept

⑦ Create a "Course" table using CREATE TABLE Command
⇒ create table course (

cid int primary key,

crname varchar(10)

);

⑧ Describe the structure of a table using "Desc" Command in SQL

⇒ desc course

⑨ Create a table Enrollment which describes Student Enrollment in a Course.

⇒ create table Enrollment (sid int references Student(sid),
cid int references Course(cid),
primary key (sid, cid));

⑩ Describe the structure of an Enrollment table

⇒ desc Enrollment

Experiment No: 1

Date:

Insert records into table Student.

① ⇒ insert into Student values (1201, 'Ananya', 'A', 18, 'Vijayawada');

⇒ insert into Student values (1208, 'Keerthi', 'S', 19, 'Guntur');

② ⇒ insert into Students (name, grade, sid) values ('Siri', 'S', 1226)

⇒ insert into Student (sid, name, address) values (1210, 'Siri', 'Vizag');

Display The records in Student table

⇒ Select * from Student;

③ update 1226 record

⇒ update Student

set age = 18

where sid = 1226.

④ update the address field of "harsha"

⇒ update Student

set address = "Guntur"

where name = "harsha";

⑤ Display students data, who are living in Guntur.

⇒ Select * from Student;

where address = "Guntur";

(16)

ROLLNO	SNAME	G
1201	Ananya	A
1208	Keerthi	S

Enrollment :-

SID	CID
1201	2
1201	3
1208	1
1226	1
1226	2
1240	4
1240	1
1240	3

(16) Give student details by using Column Aliases

⇒ Select sid as rollno, name as sname, grade as g
from student;

(17) Insert records into "Course" table.

⇒ insert into Course values (1, 'dbms');

⇒ insert into Course values (2, 'toc');

⇒ insert into Course values (3, 'os');

⇒ insert into Course values (4, 'jp');

⇒ Select * from Course;

(18) Insert records into "Enrollment" table

⇒ insert into Enrollment values (1201, 3);

⇒ insert into Enrollment values (1208, 1);

⇒ insert into Enrollment values (1201, 2);

⇒ insert into Enrollment values (1210, 1);

⇒ insert into Enrollment values (1226, 4);

⇒ insert into Enrollment values (1240, 1);

⇒ Select * from Enrollment;

Experiment No: 1

Date:

19) Display courses offered to students.

⇒ Select cname from course;

20) What is the course id of "dbms"?

⇒ Select cid from course where cname = "dbms";

⇒ Select cid as Code from course where cname = "dbms";

21) Display The student id who joined in "1" course

⇒ Select sid from Enrollment where cid = 1;

22) Give The details of students who joined in "1" course

⇒ Select S.sid, S.name, S.address

from Student S, Enrollment e

where S.sid = e.sid and e.cid = 1;

23) Display The student name, course name, and course id who joined in "dbms" course

⇒ Select S.name, C.cname, C.cid

from Student S, course C, Enrollment e

where C.cid = e.cid and C.cname = "dbms" and e.sid =

Table dropped

(8)

Table dropped

- ②4 Give the names and addresses of the students who joined in "toc" course.

⇒ select s.name, s.address
from student s, course c, enrollment e
where c.cname = "toc" and c.cid = e.cid = s.sid;

- ②5 Give the students details along with courses joined.

⇒ select s.sid, s.name, s.grade, s.age, s.address, c.cname
from student s, course c, enrollment e
where e.sid = s.sid and e.cid = c.cid;

- ②6 Drop table student table.

*** to drop a parent table we need to drop child table first

- ②7 ⇒ Drop the table enrollment.

→ drop table enrollment;

- ②8 Drop the table course

→ drop table course;
